 Bollmer,2023-09-29 Examines how our understanding of emotion is shaped by the devices we use to measure it Since the late  
 nineteenth century psychologists have used technological forms of media to measure and analyze emotion In The Affect Lab  
 Grant Bollmer examines the use of measurement tools such as electrical shocks photography video and the  
 electroencephalograph to argue that research on emotions has confused the physiology of emotion with the tools that define  
 its inscription Bollmer shows that the psychological definitions of emotion have long been directly shaped by the physical  
 qualities of the devices used in laboratory research To investigate these devices The Affect Lab examines four technologies  
 related to the history of psychology in North America spiritualist toys at Harvard University serial photography in early  
 American psychological laboratories experiments on psychopaths performed with an instrument called an Offner Dynograph  
 and the development of the electropsychometer or E Meter by Volney Mathison and L Ron Hubbard Challenging the large  
 body of humanities research surrounding affect theory The Affect Lab identifies an understudied problem in formulations of  
 affect how affect is a construction inseparable from the techniques and devices used to identify and measure it Ultimately  
 Bollmer offers a new critique of affect and affect theory demonstrating how deferrals to psychology and neuroscience in  
 contemporary theory and philosophy neglect the material of experimental scientific research Retail e book files for this title
