*The Uncharted Path from Clinic-based to Community-based Research* Bonita Stanton,Jennifer Galbraith,Linda Kaljee,2008 Community based health related research requires a reciprocal relationship between researchers and communities that differs from the

relationships established in clinic based health related research In the former not only is there a direct relationship with the individual as there is in clinic based research but an equally important and constantly changing relationship with the community Also in community based research relationships change from that in which individuals are subjects of research to the same individuals as participants or partners in the research process These academic community relationships are especially complex because frequently the community does not speak with a single voice and may have multiple different constituencies and perspectives In addition research teams comprised of several disciplines may be perceived as coming from unique academic communities which of themselves may have different ways of envisioning community based research There is a recent call for more transdisciplinary research and yet there are limited empirical studies available which critically examine how disciplines work separately and in tangent to affect community based research This book will be used both by researchers and by those teaching upper graduate level and graduate level health education

**Community-based Research** Sam Marullo,Kerry Strand,2004 [Michigan Journal of Community Service Learning](#) ,2000 [South African Journal of Higher Education](#) ,2008 [National Institute on Drug Abuse Research Monograph Series: Drug Abuse Among Minority Youth: Advances in Research and Methodology](#) ,1993 [Community-Based Research and Higher Education](#) Kerry Strand,2003-05-30 Community Based Research and Higher Education is the long awaited guide to how to incorporate a powerful and promising new form of scholarship into academic settings The book presents a model of community based research CBR that engages community members with students and faculty in the course of their academic work Unlike traditional academic research CBR is collaborative and change oriented and finds its

research questions in the needs of communities. This dynamic research model combines classroom learning with social action in ways that can ultimately empower community groups to address their own agendas and shape their own futures. At the same time it emphasizes the development of knowledge and skills that truly prepare students for active civic engagement. *Community Based Research and Higher Education* is written by five academics from different disciplines with extensive experience in community based research as teachers, researchers, administrators, scholars, and community activists. They draw on their own and others' experience to develop concrete guidelines for creating and sustaining partnerships through CBR projects as they also outline the principles that guide decisions about research design and methods. The authors offer extensive practical suggestions for incorporating CBR into courses and curricula, include voices and experiences of people from across the country who are doing CBR on their campuses and in their communities, and describe a wide range of exemplary research projects with diverse community partners such as the Southwest Improvement Council in Denver, Washington D.C.'s Council of Latino Agencies and Youthbuild, a job training program based in New Jersey. The authors conclude by detailing a series of action steps that can help institutions realize a vision of higher education based on research oriented campus community partnerships.

**Handbook of Feminist Research** Sharlene Nagy Hesse-Biber, 2007 The topic feminist research has too often been neglected in standard research methods books. The *Handbook of Feminist Research* represents the establishment of a new tradition or paradigm in viewing how the research process is implemented. Feminist researchers bring unique epistemological and methodological perspectives to the research process. Feminists' approach to methodology allows for new types of questions about women's lives and those of other marginalized groups to be addressed within their respective fields of research. This *Handbook* stresses the interconnections between epistemology, methodology, and methods. They are not disconnected from each other but work together in dynamic ways to produce new knowledge and this openness itself is also characteristic of how feminist researchers approach their work. Feminists engage synergistically with all three aspects of the research process: epistemology, methodology, and method. Through a synergistic connection between these elements of research, epistemology, methodology, and method, we find that feminist research often shapes new research endeavors that are greater than the sum of their parts. In other words, while traditional research employs these components of research, the synergistic engagement of these components in feminist research questions the status quo, aiming to raise our consciousness about how we do research. Looking at the selections provided in this *Handbook*, we are able to look at feminist research, its implementation of synergistic use of epistemology, methodology, and method, and the resulting qualities of feminist research in practice.
