*The Logic of Filtering* Melle Jan Kromhout, 2021 The Logic of Filtering traces the profound impact of technical media on the sound of music asking how do media technologies shape sound How does this affect music And how did it change what we listen for in music Since the invention of sound recording in the second half of the nineteenth century media that transmit record store and reproduce physical sound inspired dreams of perfect reproduction but were also confronted with the inevitable introduction of noise Based on a wide range of historical technical and theoretical sources author Melle Jan Kromhout explores this one hundred and forty year history of sound media and shows why noise should not be understood as unwanted by effect but instead plays a foundational role in shaping the sonic contours of recorded music The Logic of Filtering develops an extensive media archaeological analysis of the noise of sound media encompassing all the disturbances distortions and interferences that these media add to the sounds they reproduce It thereby stands to enrich our understanding of the way in which sound media changed and continue to change the sonorous qualities of music and offers new perspectives on the interaction between music media and listeners

**'I, Me, Mine?'**

Veronica Skrimsjö,2016-04-26 Currently there is

very little academic literature dealing with the topic of record collecting and when the topic is broached it appears to be done so with some level of suspicion towards the record collector As such the only depictions of record collectors in the public domain tend to be very stereotypical and demeaning This work serves as a new starting point in how the record collector and the practices involved are viewed and understood by considering the roots of these stereotypes which mainly stem from the work of the Frankfurt School theorists who lived during a time of great insecurity both in regards to new methods of production for cultural artefacts and art but also their physical lives Once this has been achieved a consideration of more realistic record collecting practices takes place through discussions with collectors themselves an examination of a collectible record label Vertigo Records and a diachronic analysis of the theories that have contributed to a fallacious view of the record collector The record collector consumes his her records on an individual basis both in terms of person to person but also and crucially even record to record Ultimately it is argued that one cannot define consumption through the artefact s production which most considerations of the record collector have mistakenly done
