Mind Mapping and Artificial Intelligence Jose Maria Guerrero, 2022-10-22 In the near future, we will see an increase in the development and use of all sorts of AI applications. Some of the more promising areas will be Finance, Healthcare, IoT, Manufacturing, Journalism, and Cybersecurity. Many of these applications generate a great amount of complex information. Natural Language Understanding is one of the most clear examples. Traditional ways of visualizing complex information, namely linear text, web pages, and hyperlink-based applications, have serious productivity problems. Users need a lot of time to visualize the information and have problems seeing the whole picture of the results. Mind mapping is probably the only way of reducing the problems inherent in these traditional ways of visualizing complex information. Most people have no clear idea about the advantages of mind mapping or the problems created by the traditional ways of visualizing complex information. The goal of *Mind Mapping and Artificial Intelligence* is to provide readers with an introduction to mind mapping and artificial intelligence, to the problems of using traditional ways of visualizing complex information, and as an introduction to mind mapping automation and its integration into Artificial Intelligence applications such as NLU and others. As more applications of Artificial Intelligence are developed in the near future, the need for the improvement of the visualization of the information generated will increase exponentially. Information overload will soon also happen in AI applications. This will diminish the advantages of using AI. Author Jos Maria Guerrero is a long-time expert in mind mapping and visualization techniques. In this book, he also introduces readers to MindManager mind mapping software, which can considerably reduce the problems associated with the interpretation of complex information generated by Artificial Intelligence software. Provides coverage of the fundamentals of mind mapping and visualization applied to Artificial Intelligence applications. Includes coverage of the scientific bases for mind mapping for the visualization of complex information. Introduces MindManager software for mind mapping. Introduces the author's MindManager toolkit for the readers to use in development of new mind mapping applications. Includes case studies and real-world applications of MindManager for AI applications, including examples using IBM Watson NLU.

Representation of Disability in Children's Video Games Krystina Madej, 2024-01-10 *Representation of Disability in Children's Video Games* looks at how children's engagement with characters and stories in video games helps create the perception of disability they have as teens and adults. Drawing on child development theory supported by neuroscience, the book shows how the scaffold of information, the schema adults have of disability, is first created at a very young age as they interact through play with characters with disabilities in narrative video games. Posing

that early video game play experiences should provide exposure to narrative schemas that add understanding and help create meaning about the disability represented the book presents how such representation in children's video games maps against cognitive development and the psychomotor and cognitive needs and abilities of children 3-12 Through close readings of over 40 PEGI 3 and PEGI 7 ESRB E 10 games and analysis of games as diverse as Backyard Baseball and Sly Cooper the author defines broad categories of representation representation as cosmetic providing exposure but not game play utility as incidental used as a device that provides purpose for the narrative or as more authentically representing the disability as integral to the character and their life The book provides readers with an overview of contemporary games that better their understanding of how children's games present disability and how children create their perceptions through interaction with characters and stories This book will be of interest to academics and students of game studies in topics such as behavioural science ethics and HCI as well as in sociology communications and digital media It is pertinent in particular to game developers and to educators disability advocates parents and policy makers
