## **Evolution Of Life Histories Evolution Of Life Histories:**

**Evolution Of Life Histories** Derek Roff, 1993-05-31 There are many different types of organisms in the world they differ in size physiology appearance and life history The challenge for evolutionary biology is to explain how such diversity arises The Evolution of Life Histories does this by showing that natural selection is the principal underlying force molding life history variation The book describes in particular the ways in which variation can be analyzed and predicted It covers both the genetic and optimization approaches to life history analysis and gives an overview of the general framework of life history theory and the mathematical tools by which predictions can be made and tested Factors affecting the age schedule of birth and death and the costs of reproduction are discussed The Evolution of Life Histories concentrates on those theoretical developments that have been tested experimentally It will interest both students and professionals in evolution evolutionary ecology mathematical and theoretical biology and zoology and entomology

### **Evolution and Genetics in Life Histories**

Hugh Dingle, J. P. Hegmann, 2013-07-11 This volume is the result of a symposium entitled Variation in Life Histories Genetics and Evolutionary Processes sponsored by the Program in Evolutionary Ecology and Behavior of the University of Iowa and held in Iowa City on October 13 and 14 1980 Prompted by a recent upsurge of interest in the evolution of life histories we chose this topic because of the obvious association between life history traits and Darwinian fitness If such an association were to be fruitfully investigated it would require the closer cooperation of population and evolutionary ecologists and quantitative and population geneticists To encourage such an association our symposium had four major aims first to facilitate intellectual exchange across disciplines among an array of biologists studying life histories second to encourage exploration of genetic variance and covariance for life history traits third to consider the ecological background for genetic variability and finally to facilitate a comparative overview both within and among species Obviously such broad aims cannot be met totally in a single volume but we think we have succeeded reasonably well in providing a representative and nourishing intellectual feast We see this book as a stimulus to the coordination of future efforts in an important and expanding area of inquiry We have divided the book into six sections

### Evolution and Genetics of Life Histories Hugh

Dingle, Joseph P. Hegmann, 2013-09-03 **Life History Evolution** Derek A. Roff, 2002 Life History Evolution represents a synthetic approach to the understanding of the evolution of life history variation using the three types of environment constant stochastic predictable as the focus under which the theory is developed and tested First the author outlines a general framework for the study and analysis of life history variation bringing together the approaches of quantitative genetic modeling and optimality analysis Using this framework he then discusses how life histories evolve in the three different types of environments each of which presents unique characteristics The theme of the book is that an understanding of evolutionary change requires analysis at both the genetic and phenotypic levels and that the environment plays a central role in such analyses Intended for graduate students and researchers the book's emphasis is on assumptions

and testing of models Mathematical processes are described but mathematical derivations are kept to a minimum Each chapter includes a summary and boxes provide supplementary material *The Evolution of Life Histories* Stephen C. Stearns,2004 *The Evolution of Life Histories* Stephen C. Stearns,1992 **A Primer of Life Histories** Jeffrey Alexander Hutchings,2021 This accessible primer encompasses the basic concepts theories and applied elements of life history evolution **Life Histories** Martin Thiel,Gary A. Wellborn,2018-05-22 Crustaceans are increasingly being used as model organisms in all fields of biology including neurobiology developmental biology animal physiology evolutionary ecology biogeography and resource management Crustaceans have a very wide range of phenotypes and inhabit a diverse array of environments ranging from the deep sea to high mountain lakes and even deserts The evolution of their life histories has permitted crustaceans to successfully colonize this variety of habitats Few other taxa exhibit such a variety of life histories and behavior A comprehensive overview of their life histories is essential to the understanding of many aspects of their success in marine and terrestrial environments This volume provides a general overview of crustacean life histories Crustaceans have particular life history adaptations that have permitted them to conquer all environments on earth Crustacean life cycles have evolved to maximize fecundity growth and ageing in a wide range of environmental conditions Individual contributions contrast benefits and costs of different life histories including sexual versus asexual production semelparity versus iteroparity and planktonic larvae versus direct development Important aspects of particular behaviors are presented e g migrations defense and territorial behaviors anti predator behavior symbiosis *Encyclopedia of Ecology and Environmental Management* ,2009-07-15 The Encyclopedia of Ecology and Environmental Management addresses the core definitions and issues in pure and applied ecology It is neither a short entry dictionary nor a long entry encyclopedia but lies somewhere in between The mixture of short entry definitions and long entry essays gives a comprehensive and up to date alphabetical guide to over 3000 topics and allows any subject to be accessed to varying levels of detail while the longer entries provide general reviews of subjects the short definitions provide specific details on more specialised areas An important feature of the Encyclopedia which sets it apart from other similar works is the comprehensive cross referencing The most comprehensive and up to date reference work in pure and applied ecology Definitions cover the entire spectrum of pure and applied ecological research Distinguished editorial board Dr Peter Moore Professor John Grace Professor Bryan Shorrocks Professor Steven Stearns Professor Don Falk International team of distinguished authors over 200 contributors from 20 countries 3000 headwords defined Over 250 long entries review major topics Heavily illustrated with a section of colour plates Complete one volume guide to pure and applied ecology Presents cutting edge definitions in emerging fields as well as grounding in well established areas of ecology *Life History Evolution in Plants* Timo Olavi Vuorisalo,P. Mutikainen,2001-12-14 The lack of discussion of the life histories of modular organisms is the weakness of this book that I most regret Modular organisms are different S C Stearns *The Evolution of Life Histories* 1992 Life history theory endeavours

to increase our understanding of the processes whereby the broad features of the life cycles of organisms such as the timing and magnitude of reproduction have evolved. Although reproductive traits have dominated as study objects due to their immediate importance for evolutionary success, much work has also been conducted on patterns of development, growth, and senescence as well as on the shifts in resource allocation related to these processes. The basic axiom of life history theory is that patterns of life histories such as reproductive traits are subject to evolutionary explanation. This idea can be traced back at least as far as Darwin's *Origin of Species* (1859). In his discussion of plant domestication, Darwin wrote, "I cannot doubt that the continued selection of slight variations either in the leaves, the flowers, or the fruit will produce races differing from each other chiefly in these characters." Darwin was impressed by the success of plant breeders in moulding the growth and reproductive parameters of cultivated plants and believed that natural selection could have a similar impact in natural populations.

**The Evolution of Human Life History** Kristen Hawkes, Richard R. Paine, 2006. Human beings may share 98 percent of their genetic makeup with their nonhuman primate cousins, but they have distinctive life histories. When and why did these uniquely human patterns evolve? To answer that question, this volume brings together specialists in hunter-gatherer behavioral ecology and demography, human growth, development, and nutrition, paleodemography, human paleontology, primatology, and the genomics of aging. The contributors identify and explain the peculiar features of human life histories such as the rate and timing of processes that directly influence survival and reproduction. Drawing on new evidence from paleoanthropology, they question existing arguments that link human's extended childhood dependency and long post-reproductive lives to brain development, learning, and distinctively human social structures. The volume reviews alternative explanations for the distinctiveness of human life history and incorporates multiple lines of evidence in order to test them.

Insect Life History Patterns R. F. Denno, Hugh Dingle, 1981-08-05. Host plant variation and insect life histories. Population and species variation in life histories. Life histories and nonequilibrium populations.

**Men** Richard G. Bribiescas, 2006. Males account for roughly 50 percent of the global population, but in America and other places they account for over 85 percent of violent crime. A graph of relative risk of death in human males shows that mortality is high immediately following birth, falls during childhood, then exhibits a distinct rise between the ages of 15 and 35, primarily the result of accidents, violence, and risky behaviors. Why? What compels males to drive fast, act violently, and behave stupidly? Why are men's lives so different from those of women? *Men* presents a new approach to understanding the human male by drawing upon life history and evolutionary theory. Because life history theory focuses on the timing of and energetic investment in particular aspects of physiology such as growth and reproduction, Richard Bribiescas and his fellow anthropologists are now using it in the study of humans. This has led to an increased understanding of human female physiology, especially growth and reproduction from an evolutionary and life history perspective. However, little attention has been directed toward these characteristics in males. *Men* provides a new understanding of human male physiology and applies it to contemporary health issues such as prostate

cancer testosterone replacement therapy and the development of a male contraceptive Men proves that understanding human physiology requires global research in traditionally overlooked areas and that evolutionary and life history theory have much to offer toward this endeavor *Shellfish Life Histories and Shellfishery Models* David E. Aiken, S. L.

Rossano, Edward P. Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences

**Mechanisms of Life History Evolution** Thomas Flatt, Andreas Heyland, 2011-05-12 Life history theory seeks to explain the evolution of the major features of life cycles by analyzing the ecological factors that shape age specific schedules of growth reproduction and survival and by investigating the trade offs that constrain the evolution of these traits Although life history theory has made enormous progress in explaining the diversity of life history strategies among species it traditionally

ignores the underlying proximate mechanisms This novel book argues that many fundamental problems in life history evolution including the nature of trade offs can only be fully resolved if we begin to integrate information on developmental physiological and genetic mechanisms into the classical life history framework Each chapter is written by an established or up and coming leader in their respective field they not only represent the state of the art but also offer fresh perspectives for future research The text is divided into 7 sections that cover basic concepts Part 1 the mechanisms that affect different parts of the life cycle growth development and maturation reproduction and aging and somatic maintenance Parts 2 4 life history plasticity Part 5 life history integration and trade offs Part 6 and concludes with a synthesis chapter written by a prominent leader in the field and an editorial postscript Part 7 Life Histories of North American Petrels and Pelicans and Their Allies Arthur Cleveland Bent, 1922 This bulletin is a continuation of the work on the life histories of North American birds begun in Bulletin 107 and continued by Bulletin 113 The same general plan has been followed and the same sources of information have been utilized This bulletin covers the Orders Turbinares and Steganopodes Petrels Pelicans and their allies

Blackwell's Concise Encyclopedia of Ecology Peter P. Calow, 2009-04-01 The language of ecology has grown rapidly and changed extensively over the last decade From Arrhenotoky to Psammosere from the One tailed test to Zoocoenosis the Blackwell Concise Encyclopedia of Ecology provides concise non technical definitions of over 2000 ecological terms covering the complete spectrum of pure and applied ecological research The definitions are drawn from the Encyclopedia of Ecology and Environmental Management and are fully cross referenced This is the most comprehensive and up to date dictionary of ecological terms available It should be invaluable to students and researchers alike Over 2000 terms defined Avoids technical jargon Fully cross referenced Includes common abbreviations *Life Histories of Animals, Including Man; Or, Outlines of Comparative Embryology* Alpheus Spring PACKARD (the Younger.), 1876
