Betz, 2023-01-31 This book provides readers with international exemplars of nurse-led, nurse-directed pediatric models of care. It offers innovative and forward-thinking models of nursing care, incentives, and opportunities for nurses to replicate similar nurse-led models of care in their own clinical and community-based settings. Readers will benefit from selected and proven nurse-led, nurse-directed pediatric models of care that have been developed, implemented, and evaluated by advanced practice pediatric nurses, including successful exemplars from less developed countries and underserved populations. This book is a welcome addition to faculty in child health graduate programs and/or clinicians in hospitals to have this kind of model for practice. This book encompasses an extensive compilation of contributions of international authors, also from countries that have been rarely featured in books, and it facilitates worldwide linkages with colleagues internationally. *Neonatal ECMO in 2019: Where Are We Now? consists of didactic lectures and water drill of ECMO circuit. However, learners cannot experience changes of clinical condition of patients. Simulation based learning is a perfect answer to this by providing participants authentic interactive team based training without risk to real patients. Hospital Authority HA of Hong Kong has implemented a corporatewide ECMO simulation based training program since 2014. It aims to provide a structural and standardized training opportunity for clinical staff members to gain hands on experience in ECMO circuit management and troubleshooting technique. In the program participants will go through three categories of scenarios: 1 replicate common real patient clinical experience, 2 replicate incident that only happens infrequently, and 3 imitate clinical situation that is rarely happened but life threatening and where prompt and correct actions are necessary. Every scenario has its own debriefing session that covers technical and human factor issues. Since 2014, 32 identical full day courses were conducted and 285 doctors and nurses were trained. All participants were satisfied with the training and expressed that the simulation was an effective model for ECMO training. The training met their need and they could apply what they learned in real life practice.
