## **Econometric Analysis Of Count Data:**

Econometric Analysis of Count Data Rainer Winkelmann, 2013-11-11 Graduate students and researchers are provided with an up to date survey of statistical and econometric techniques for the analysis of count data with a focus on conditional distribution models Proper count data probability models allow for rich inferences both with respect to the stochastic count process that generated the data and with respect to predicting the distribution of outcomes The book starts with a presentation of the benchmark Poisson regression model Alternative models address unobserved heterogeneity state dependence selectivity endogeneity underreporting and clustered sampling Testing and estimation is discussed from frequentist and Bayesian perspectives Finally applications are reviewed in fields such as economics marketing sociology demography and health sciences The fourth edition contains several new sections for example on nonnested hurdle models quantile regression and on software Many other sections have been entirely rewritten and extended

**Econometric Analysis of Count Data** Rainer Winkelmann, 2000 The primary objective of this book is to provide an introduction to the econometric modeling of count data for graduate students and researchers It should serve anyone whose interest lies either in developing the field further or in applying existing methods to empirical questions Much of the material included in this book is not specific to economics or to quantitative social sciences more generally but rather extends to disciplines such as biometrics and technometrics Applications are as diverse as the number of congressional budget vetoes the number of children in a household and the number of mechanical defects in a production line The unifying theme is a focus on regression models in which a dependent count variable is modeled as a function of independent variables which may not be counts as well The modeling of count data has come of age Inclusion of some of the fundamental models in basic textbooks and implementation on standard computer software programs bear witness to that Based on the standard Poisson regression model numerous extensions and alternatives have been developed to address the common challenges faced in empirical modeling unobserved heterogeneity selectivity endogeneity measurement error and dependent observations in the context of panel data or multivariate data to name but a few as well as the challenges that are specific to count data e.g. overdispersion and underdispersion

**Econometric Analysis of Count Data** Rainer Winkelmann, 2003 The book provides graduate students and researchers with an up to date survey of statistical and econometric techniques for the analysis of count data with a focus on conditional distribution models Proper count data probability models allow for rich inferences both with respect to the stochastic count process that generated the data and with respect to predicting the distribution of outcomes The book starts with a presentation of the benchmark Poisson regression model Alternative models address unobserved heterogeneity state dependence selectivity endogeneity underreporting and clustered sampling Testing and estimation is discussed from frequentist and Bayesian perspectives

Trivedi,2013-05-27 This book provides the most comprehensive and up to date account of regression methods to explain the frequency of events **Regression Analysis of Count Data** A. Colin Cameron,Pravin K. Trivedi,2013-05-27 Students in both social and natural sciences often seek regression methods to explain the frequency of events such as visits to a doctor auto accidents or new patents awarded This book now in its second edition provides the most comprehensive and up to date account of models and methods to interpret such data The authors combine theory and practice to make sophisticated methods of analysis accessible to researchers and practitioners working with widely different types of data and software in areas such as applied statistics econometrics marketing operations research actuarial studies demography biostatistics and quantitative social sciences The new material includes new theoretical topics an updated and expanded treatment of cross section models coverage of bootstrap based and simulation based inference expanded treatment of time series multivariate and panel data expanded treatment of endogenous regressors coverage of quantile count regression and a new chapter on Bayesian methods **The Econometric Analysis of Count Data** Adrian Colin Cameron,Pravin Trivedi,1998-07 **The Econometric Analysis of Count Data** Colin Cameron,1998-07 *Econometric Analysis of Health Data* Andrew M. Jones,Owen O'Donnell,2002-05-17 Given extensive use of individual level data in Health Economics it has become increasingly important to understand the microeconometric techniques available to applied researchers The purpose of this

book is to give readers convenient access to a collection of recent contributions that contain innovative applications of microeconometric methods to data on health and health care. Contributions are selected from papers presented at the European Workshops on Econometrics and Health Economics and published in *Health Economics Topics*. Topics covered include Latent Variables, Unobservable heterogeneity and selection problems, Count data and survival analysis, Flexible and semiparametric estimators for limited dependent variables, Classical and simulation methods for panel data. Publication marks the tenth anniversary of the Workshop series. Doctoral students and researchers in health economics and microeconomics will find this book invaluable. Researchers in related fields such as labour economics and biostatistics will also find the content of use.

**Econometric Analysis of Non-standard Count Data** Ryan T. Godwin, 2012. This thesis discusses various issues in the estimation of models for count data. In the first part of the thesis we derive an analytic expression for the bias of the maximum likelihood estimator (MLE) of the parameter in a doubly truncated Poisson distribution which proves highly effective as a means of bias correction. We explore the circumstances under which bias is likely to be problematic and provide some indication of the statistical significance of the bias. Over a range of sample sizes our method outperforms the alternative of bias correction via the parametric bootstrap. We show that MLEs obtained from sample sizes which elicit appreciable bias also have sampling distributions which are unsuited to be approximated by large sample asymptotics and bootstrapping confidence intervals around our bias adjusted estimator is preferred as two tiers of bootstrapping may incur a heavy computational burden. Modelling count data where the counts are strictly positive is often accomplished using a positive Poisson distribution. Inspection of the data sometimes reveals an excess of ones analogous to zero inflation in a regular Poisson model. The latter situation has well developed methods for modelling and testing such as the zero inflated Poisson ZIP model and a score test for zero inflation in a ZIP model. The issue of count inflation in a positive Poisson distribution does not seem to have been considered in a similar way. In the second part of the thesis we propose a one inflated positive Poisson (OIPP) model and develop a score test to determine whether there are too many ones for a positive Poisson model to fit well. We explore the performance of our score test and compare it to a likelihood ratio test via Monte Carlo simulation. We find that the score test performs well and that the OIPP model may be useful in many cases. The third part of the thesis considers the possibility of one inflation in zero truncated data when overdispersion is present. We propose a new model to deal with such a phenomenon the one inflated zero truncated negative binomial (OIZTNB) model. The finite sample properties of the maximum likelihood estimators for the parameters of such a model are discussed. This Chapter considers likelihood ratio tests which assist in specifying the OIZTNB model and investigates the finite sample properties of such tests. The OIZTNB model is illustrated using the medpar data set which describes the hospital length of stay for a set of patients in Arizona. This is a data set that is widely used to highlight the merits of the zero truncated negative binomial (ZTNB) model. We find that our OIZTNB model fits the data better than does the ZTNB model and this leads us to conclude that the data are generated by a one

The rapid growth of foreign banks has aroused a growing interest in the academic field and specifically as regards to the question of why foreign banks exist This book aims to establish the relationship between trust as contextual knowledge capital built between the Chinese government and foreign banks and foreign banks knowledge capital and the relationship between the former and foreign banks long term commitment By investigating the development strategy of foreign banks and by examining and explaining the importance of foreign banks long term commitment to their development this book has demonstrated that foreign banks established branches in China not only to follow their home country customers in order to retain their knowledge capital but also to gain market access Trust as contextual knowledge capital built between foreign banks and the Chinese government could assist their knowledge capital retention and their market access strategy Foreign banks long term commitment could help them to achieve this contextual knowledge capital This book thus has major implications for the development strategy of foreign banks in a government oriented economy with a controlled banking sector The first book covering the relationship between the governments trust and support and the rise of foreign banks in China Few studies have analysed the development of foreign banks from the standpoint of government i e the supply side of the banking licence and the relationship between the development of foreign banks and the trust built between foreign banks and the government The first book showing how some big foreign banks in China such as HSBC built relationship with the Chinese government     Econometric Analysis of Panel Data Badi H. to the progress of the methodology establishing several new results and introducing new models Starting from the standard Poisson regression model as a benchmark the causes symptoms and consequences of misspecification are worked out Both parametric and semi parametric alternatives are discussed While semi parametric models allow for robust inference parametric models can identify features of the underlying data generation process
