Encyclopedia of Energy, Natural Resource, and Environmental Economics ,2013-03-29 Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government **Economic Development and the**

Environmental Ecosystem Hasan Dincer,Serhat Yüksel,2023-04-17 This volume illustrates the relationship between environmental factors and economic development of countries from various angles Global warming has become a problem that threatens the whole world especially in recent years It is known that the main reason for this is carbon emissions On the other hand carbon emissions generally consist of fossil fuel based energy consumption This situation creates very serious environmental problems Because of this problem the concept of carbon zero has become very popular especially in recent years Many countries take some actions to minimize carbon emissions Especially in the coming years carbon emissions will become a competitive factor for countries and businesses In this respect countries with low carbon emissions will be preferred more in foreign trade In addition businesses that do not generate carbon emissions in the production process will

also gain a significant competitive advantage in international trade. The contributions take a multidimensional outlook to energy investments and offer solutions for decision making for energy projects in risky business ecosystems. Water Resources Journal, 2000. *Economic Sustainability and Social Equality in the Technological Era* Dwi Irawan, Agung Prasetyo Nugroho Wicaksono, Aviani Widayastuti, Rizki Febriani, Ali Roziqin, 2024-11-25. This book is a comprehensive compilation of academic papers and presentations delivered at the conference. It brings together research from various disciplines within the humanities and social sciences such as cultural studies, sociology, psychology, education, literature, and history. It meticulously covers several critical areas of study reflecting the diverse and interdisciplinary nature of the conference. In the realm of post-pandemic economic development, it explores strategies for economic recovery and resilience, highlighting the role of finance and social capital in rebuilding economies. Technology and sustainable cities are examined through case studies and theoretical frameworks that discuss smart city initiatives, technological integration, and sustainability practices. The section on economic development, accountability, and finance risk delves into methods for ensuring transparency and managing financial uncertainties in a globalized economy. Social and environmental policies and planning are addressed with a focus on creating equitable and sustainable communities. This text will be valuable to academics, researchers, and students in the fields of humanities and social sciences. Following the Brexit and Trump election cycles, consistent long-term policy solutions to environmental and other societal challenges are becoming increasingly difficult to achieve. Stepping into this breach is a clear opportunity for innovation by public and privately held companies as well as the increasingly significant role of investment and consumption. *Sustainable Innovation and Impact* provides a roadmap of the many critical pathways of positive change emerging to achieve modern-day societal success, including rapidly evolving corporate and investment innovation and impact strategy considerations. Exploring innovation around the future of energy, electricity, and related technologies as well as transportation and buildings efficiency, Krosinsky and Cort consider ideas framed around the circular economy, operational and supply chain strategies, and the global economy. Drawing together a diverse range of contributors and case studies, this book will be of great relevance to students, scholars, and professionals with an interest in innovation, economics, and sustainability. More broadly, *Water & Global Climate Change* Kenneth D. Frederick, Peter H. Gleick, 1999. *International Ethics* Mark R. Amstutz, 2005-01-03. This text presents the concepts, theories, methods, and traditions of ethical analysis and then applies them to case studies in the areas of human rights, military force, foreign intervention, economic statecraft, and global political justice. *Encyclopedia of the Anthropocene*, 2017-11-27. Encyclopedia of the Anthropocene Five Volume Set presents a currency-based global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change.
