**Education and Training for Clinical Chemistry** M. Rubin, P. Lous, 2012-12-06

While the historic roots of clinical chemistry originate from the chemical sciences, the growth of the subject has been dependent upon the political, social, economic and technologic national soil in which it has developed. Thus the present leaders in this field have backgrounds variously in chemistry, medicine, pharmacy or sometimes biology. Today clinical chemistry has attained stature as a unified, independent discipline. It is characterized by active and productive international and national societies, its function codified in the law of many countries, its scientific content the sole subject of international and national journals as well as textbooks and educational programs, and its international, regional and national meetings have become focal points for major exchange of scientific, clinical and technical information and exhibition. The positive impact of the discipline upon the delivery of health care has given it a significant position in the economics of public health. As a consequence it has become the most rapidly growing segment of the industrial and commercial component of health maintenance. These changes have brought the need to define the educational and training processes to prepare future leaders of clinical chemistry. The diverse backgrounds of the present directors of clinical chemistry, however, has required that the viewpoints of chemists, pharmacists, physicians and biologists be brought into harmony. This has been achieved by the years of discussion, debate and review by colleagues of varied professional backgrounds. This monograph reflects their consensus viewpoint for the practice of clinical chemistry at its most advanced level.
