Dillow, 2019-06-04 This accessible and always entertaining Booklist combination of history pop science and in depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now as well as how prepared we are against asteroid caused catastrophe One of these days warns Gordon Dillow the Earth will be hit by a comet or asteroid of potentially catastrophic size The only question is when In the meantime we need to get much better at finding objects hurtling our way and if they re large enough to penetrate the atmosphere without burning up figure out what to do about them We owe many of science s most important discoveries to the famed Meteor Crater a mile wide dimple on the Colorado Plateau created by an asteroid hit 50 000 years ago In his masterfully researched Fire in the Sky Dillow unpacks what the Crater has to tell us Prior to the early 1900s the world believed that all craters on the Earth and Moon were formed by volcanic activity Not so The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs and it has opened up a new field of asteroid observation that is brimming with urgency Dillow looks at great asteroid hits of the past and modern day asteroid hunters and defense planning experts including America s first Planetary Defense Officer Satellite sensors confirm that a Hiroshima scale blast occurs in the atmosphere every year and a smaller one kiloton blast every month While Dillow makes clear that the objects above can be deadly he consistently inspires awe with his descriptions of their size makeup and origins Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead Fire in the Sky is ultimately a testament to our universe s celestial wonders     *Heaven's Gate* Benjamin E. **Dictionary of Minor Planet Names** Lutz D. Schmadel,2013-03-09 According to a long standing astronomical tradition the naming of minor planets in the solar system is the privilege of the discoverers Contrary to most other kinds of celestial objects which receive complex alpha numerical designations the names of minor planets often say more about the discoverers than about the object in question There is a rich and colourful variety of ingenious names from those of heavenly goddesses in the nineteenth century to the more prosaic and sometimes very specific names of observatories towns and mountains computers and persons given by present day discoverers Commission 20 of the International Astronomical Union under whose auspices the naming of minor planets falls has long been concerned with the need to establish a complete catalogue of these names as well as of the interpretation of their meanings For this purpose a Study Group on the Origin of Minor Planet Names was set up at the time of the IAU General Assembly in Baltimore in August 1988 The Working Group immediately started to collect information about these matters from all available sources including some earlier incomplete compilations made in the U S and in Europe and also by personal interaction with living discoverers of minor planets
