Handbook of Mental Health Interventions in Children and Adolescents Hans Steiner,2004-03-29 The Handbook of Mental Health Interventions in Children and Adolescents is an essential guide for mental healthcare professionals to the theory and practice of mental health treatment for children up to age nineteen Written by a panel of the best known names in the field this systematic and comprehensive resource includes the most current information on developmental science as it pertains to treatment psychopharmacology psychotherapy sociotherapy and the integration of treatments **Effectiveness of Dialectical Behavior Therapy in the Treatment of Adolescent Girls with Borderline Personality Features in an Outpatient Community Mental Health Setting** Jennifer L. Denaro,2007 Dialectical Behavior Therapy DBT an empirically supported treatment for adults with borderline personality disorder BPD has recently been applied to other populations Given the increase in the number of adolescent girls seeking treatment for serious and potentially life threatening behaviors an empirically validated treatment approach would be extremely helpful to the mental health community and add to the body of knowledge regarding adolescent girls with suicidal behaviors The present study compared the outcome of the addition of an adapted version of a DBT skills training group to psychotherapy with the outcome of a treatment as usual TAU control group for suicidal adolescents with borderline personality features It examined differences in suicide ideation and self injurious behavior as well as self reported levels of depression anxiety and anger before and after treatment in an outpatient program Although the participants were not randomly assigned there were no significant differences between the initial DBT group and the TAU control group on sample characteristics including age parasuicidal behavior number of features of borderline personality disorder depression anxiety and anger The study was based on a repeated measures design and

yielded significantly greater reduction in suicide ideation and depression in the DBT group than the TAU group. The results indicate that DBT skills training may be an effective outpatient treatment approach for adolescent girls who are at risk for suicide. *Dialectical Behavior Therapy in Improving Nonsuicidal Self-injury and Suicidal Ideation Among an Adolescent Population in a Private Practice Setting* Brooke Frazer, 2020. Nonsuicidal self-injury (NSSI) is an intentional act of self-harm without the intention of completing suicide. Prevalence rates among adolescents engaging in NSSI are increasing and are higher than any age group. Although current research continues to expand with regards to methodology, prevalence, and functions, a dearth of evidence remains around the treatment of this behavior among adolescents. A small but growing body of research on Dialectical Behavior Therapy for Adolescents (DBT-A) for decreasing suicidal ideation and related behaviors exists. DBT-A is an adaptation of the integrated treatment of DBT and has been found to improve one's maladaptive thoughts, behaviors, and emotional reactions but has not yet been used to address NSSI separately from suicidal ideation. The following study used a changing conditions design across participants to investigate improvements in NSSI and suicidal ideation separately after completing phases of DBT-A. The study revealed mixed results regarding reductions in NSSI and suicidal ideation through phases of DBT-A. Total DBT-A treatment revealed the most promise in decreasing suicidal ideation with the most improvement during middle treatment phases. Implications of the current findings and recommendations for future research are discussed.

Evidence-based Practice in Suicidology Maurizio Pompili, Roberto Tatarelli, 2011. Evidence-based methods have over recent decades enabled us to prune the vineyard of suicidology. Read this book to see how the field looks today, trimmed back and flourishing as never before. It will show you much of what we know and what we don't know about suicide and take you to the cutting edge. John T. Maltsberger MD, Associate Clinical Professor of Psychiatry, Harvard Medical School, Boston, MA. Book Jacket.

Dialectical Behavior Therapy Adapted for Suicidal and Multiproblem Adolescents John Jacob Loeffler, 2016. Dialectical behavior therapy (DBT) is a comprehensive treatment that is effective for rehabilitating chronically suicidal adults. Given that suicidal and self-injurious behaviors are also a significant public health concern for adolescents, there is a need for a therapy to effectively treat these behaviors. To fulfill this treatment need, clinicians adapted the structure and content of DBT to provide a developmentally appropriate treatment for adolescents. Presently, a number of empirical studies support the efficacy of DBT for adolescents with suicidal behaviors as well as other psychiatric conditions. In light of the growing literature base for DBT-A, it is important to review the theoretical rationale and empirical support for this adaptation of DBT. Thus, this paper reviews DBT philosophical underpinnings and treatment principles for suicidal adults, research and the theoretical and program adaptations of DBT-A. Last, this paper reviews the literature on DBT for suicidal and multiproblem adolescents with a concentration on the limitations, future directions, and clinical applications.

American Journal of Psychotherapy, 1947. **The Design of a Prototype Therapeutic Computer Training Program for Suicidal Adolescents** Yiling Yang, 2015. Adolescent suicide is a serious

social issue but the current health care system cannot guarantee dissemination of effective psychotherapies to everyone in need This project is an attempt to develop a computerized therapeutic program for suicidal adolescents as a supplement to traditional psychotherapy The program is built upon the Dialectical Behavior Therapy DBT and is offered after the 20 week DBT skills training to practice and reinforce the behavioral skills acquired The exploratory development process has beheld the evolution of the program from didactic to interactive from skills based to story oriented from unrealistic 3D ambition to practical PowerPoint prototype from common sense to scientific content and has resulted in a basic simple yet feasible and clinically usable fifth version In the pilot evaluation study patients expressed their favor of the current version and the results indicated a potential effectiveness in reducing dysfunctional coping behaviors although the exact clinical efficacy remains to be validated This project has contributed to the knowledge on how to deliver traditional treatment via computer medium and has laid a foundation for future improvement and implementation If the model is validated it will have the potential to be integrated into the traditional DBT and to provide additional care and support for the adolescent patients **Oxford**
