position may even create extremely upsetting problems One such problem is deans high level of work related stress which can over time have both personal and professional consequences by adversely affecting their health and impacting the quality of their administrative performance It is therefore important for deans and the educational institutions they work for to understand the relationship between diverse leadership orientations and work related stress Using Bolman and Deal s 2008 leadership frames as its template this study conducted a survey of 101 academic deans from five state Universities in Region IV A Philippines Analysis revealed that the deans subscribed most to the human resource leadership frame followed by the symbolic and structural frames and lastly the political frame Regression analysis disclosed that the symbolic frame significantly decreased administrative task stress Thus it can be inferred that strengthening the symbolic frame could be a gateway for academic leadership to moderate administrative task stress Regression analysis disclosed that the symbolic frame significantly decreased administrative task stress Thus it can be inferred that strengthening the symbolic frame could be a gateway for academic leadership to moderate administrative task stress
