Exercises in Plant Disease Epidemiology Leonard J. Franch, 1997 Exercises in Plant Disease Epidemiology Second Edition provides a wide range of exercises to help users learn and practice the latest most advanced methods for determining the spread and control of plant diseases. Research and extension scientists will use the book to get up to speed quickly and the exercises featured in the book will offer various levels of difficulty to challenge graduate students and postdoctoral scientists. This highly practical educational title offers a structured approach ideal for both classroom instruction and self study. Each exercise has a common format with an emphasis on procedure and evaluation. In addition to the print content of the book, users can go to a special online portal for hands on engagement in statistical and quantitative exercises. Case studies of specific diseases and processes are presented as a bulleted list supplying essential information at a glance. Comprehensive Coverage: Divided into six primary parts, this valuable reference introduces basic concepts of plant pathology with historical perspectives, fundamental ideas of disease and disease relationships with the environment. It details various disease causing organisms including viruses, prokaryotic organisms, plant parasitic nematodes, fungi, plant parasitic seed plants and other biotic and abiotic diseases. Exploring various plant-pathogen interactions including treatments of molecular attack strategies, extracellular enzymes, host defenses and disruption of plant function, the book presents the basic ideas of epidemiology, control strategies and disease diagnosis.
