**Navigating AI Ethics: Building a Responsible and Equitable Future**

Rick Spair, In an era where artificial intelligence AI is rapidly transforming every aspect of our lives from healthcare and education to finance and national security society stands at a critical crossroads The promise of AI is undeniable enhanced efficiency groundbreaking discoveries and solutions to some of the world's most complex challenges But alongside this remarkable potential lies profound responsibility As AI technologies become more autonomous and embedded into the fabric of our world they also introduce ethical dilemmas that demand our immediate attention Navigating AI Ethics Building a Responsible and Equitable Future is a timely exploration of these ethical challenges It offers a comprehensive guide to understanding how AI systems can and must be developed and deployed in ways that reflect the principles of fairness accountability and human dignity The decisions we make today in governing AI will reverberate for generations to come

shaping not only technological progress but also the very fabric of our global society Ethical considerations in AI are no longer abstract thought experiments confined to academic circles We are already witnessing the real world impact of AI systems in determining who gets hired who receives loans how law enforcement resources are allocated and even who receives critical medical care Yet as these technologies become more powerful they also become more opaque raising urgent questions about transparency bias accountability and control Who is responsible when AI systems make mistakes or produce biased outcomes How can we ensure that AI serves the interests of all humanity rather than reinforcing existing inequalities or creating new ones This book aims to provide answers to these questions by offering a roadmap for building a responsible and equitable AI future It explores the ethical principles that should guide AI development and presents practical frameworks for incorporating these principles into real world applications Drawing on insights from philosophers technologists policymakers and industry leaders Navigating AI Ethics seeks to balance innovation with ethical responsibility At its core this book is about safeguarding the human element in AI As much as we are captivated by the potential of intelligent machines the ultimate goal must always be to enhance rather than diminish human well being This involves not only preventing harm and addressing bias but also ensuring that the benefits of AI are distributed fairly across all sectors of society As you journey through this book you will gain a deeper understanding of the evolution of AI ethics from early theoretical discussions to the concrete challenges facing us today You will explore the pivotal roles that data bias privacy and transparency play in shaping AI's ethical landscape and you will confront the difficult questions surrounding autonomy accountability and control in an increasingly automated world The book also offers a forward looking perspective examining the future of AI ethics as we edge closer to the development of superintelligent systems and how global cooperation will be essential to navigating these uncharted waters Navigating AI Ethics Building a Responsible and Equitable Future is more than just a discussion of the problems AI presents it is a call to action The future of AI is not predetermined it will be shaped by the choices we make today By embracing an ethical approach to AI development we can ensure that these technologies contribute to a future that is not only intelligent but also just fair and aligned with the highest ideals of humanity This is the future we must strive for one where AI serves humanity upholds ethical standards and helps build a world that is better for all Welcome to this critical exploration of AI ethics Together we can navigate the complex challenges of AI and ensure that its future is both responsible and equitable

Aron,James Dyke,2025-10-28 While there has been discussion for decades about the need to rethink the core purpose of academia to enable all to live well on a planet of finite resources humanity's present predicaments point to a paradox at the heart of the academic enterprise Although academic institutions have originated research and innovations that underpin much of what we view as development and progress these same advances are also responsible for the global crises we now face Indeed many voices are now arguing that academia can and must do more to drive the transformative change that is needed if we are to avert the imminent catastrophe that is almost upon us The Alliance for Sustainability leadership in Education EAUC in conjunction with Second Nature and the United Nations Environment's Youth and Education Alliance announced in 2019 that over 7 000 higher and further education institutions across six continents were declaring a climate emergency with a three point plan for action as part of the Race to Zero This enshrined a bolder commitment from academia to play its part in achieving net zero greenhouse gas emissions While there has been success over several decades in fostering Education for Sustainable Development ESD and in embedding sustainability in curricula the efficacy of this has arguably been limited by the disciplinary silos in which academics find themselves Similarly the research and scholarly work that is needed to fully understand planetary limits transcends the traditional silos of academic disciplines This Research Topic then will examine what needs to change to optimise ESD and transdisciplinary approaches to research and teaching It will explore ways in which theories of change can be brought to bear on these issues Our Research Topic also centres on the responsibility acknowledged increasingly by academics for academic institutions and sectors and for academics themselves to do more As trusted educators communicators and policy influencers academia has unique potential and responsibility to guide students and society through this transition to a better future In the case of many academics this means embracing advocacy and activism as their moral responsibility at this point in humanity's history To this end the Research Topic will consider ways in which climate justice principles may be used to explore the responsibilities of academic institutions as one example of an actor with the capacity to influence the drivers of climate breakdown to act In some nations academic institutions have fallen prey to a set of neoliberal assumptions that have arguably diminished the agency of individual academics The marketisation of higher

education is rife in some nations e g UK and US and while some academics have documented rising inequality a deepening climate and ecological crisis socio economic breakdown and the deteriorating psychological and physical well being these engender they have so far proven mostly powerless to reorient their fields to confront these challenges at the institutional level Consequently they remain unable to pursue an agenda for change that benefits their students and wider society This Research Topic welcomes research that explores actions available to academics from diverse perspectives including models of behavioural change Decades of research have shown that warnings do not work and that evidence based recommendations do not necessarily translate into policy or institutional change Academics increasingly refer to a broken science society contract suggesting that calls to listen to the science and expectations that warnings issued by scientists will be heeded reflect a depoliticized view of the relationships between science and society This failure to recognise the intricate ways in which science and policy are connected raises questions about the neutrality of research and the academic enterprise Our Research Topic invites articles that explore how we might re make the science society contract Questions about the independence and interdependence of research and teaching inevitably arise when academic institutions are in receipt of funds from corporations charities foundations and individuals Institutions can be compromised by vested interests often in the form of corporate interests that can influence research curriculum and staff appointments and the will of senior management to address this problem is poor While there are laudable initiatives aimed at resolving intersecting challenges and promoting transdisciplinary approaches in higher education it is fair to say that increasing numbers of academics globally realise that we are not set up to ready society for an era of colliding environmental and social crises Many fear that academia is guilty of perpetuating the problems that have created this crisis And while growing numbers hold this view few have ready answers as to what more academics and academic institutions can do In spite of this some academics have chosen to step outside of their conventional roles embracing advocacy and activism either taking individual action outside of their role or seeking to drive change within their institutions One problem is that action is fragmented often reliant upon the energies and tenacity of one or more individuals who have sought to re define their roles to embrace the responsibility they feel to act The Research Topic will serve to aggregate work on academic activism and to raise awareness of ways in which academics can act It will also examine the notion that we need to remake the science society contract and will explore what that entails The Research Topic will explore the interrelations between science and society and highlight the need to examine political dimensions of decision making and knowledge production To begin to provide answers to the questions of what it is that academics can do to drive transformational change this Research Topic brings together voices from diverse disciplines and nations Their voices have in common one thing each has reflected on or re imagined their role and purpose as an academic and each has embraced advocacy or activism The articles will be organised around three broad themes i In what ways are our academic institutions either failing or succeeding We invite articles that expose the overt and covert influences

on academia such as neoliberal structures and fossil fueled research agendas We also invite articles centred on examples of good practice such as initiatives to foster transdisciplinary approaches to research and education ii Trailblazers for transformative change We invite case studies and critiques from the front lines from academics exploring and putting into practice their own take on What can I do Evaluations of what has and has not worked to drive change at the institutional and individual levels are welcomed iii The disruptors that are already initiating transformations in HE The growth of for profit private providers open access teaching resources and other online approaches that threaten the business models of existing public and nonprofit institutions who struggle to compete with the relevance and just in time education that is becoming available via novel actors We welcome articles exploring the potential for disruption      **Towards HRI of Everyday Life**

Karolina Zawieska, Mohammad Obaid , Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03 Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain      **Artificial Intelligence** Rainer Born, 1989      **AI and Expertise** Henri Farreny, 1989
